Turner Syndrome Foundation

How Developed: Chronic endocrine conditions like Turner Syndrome can be complex and challenging for patients to successfully manage—and especially when transitioning to a new health care team. Recognizing the need to improve this transition process and to enhance care coordination between practices, the Endocrine Society spearheaded an initiative to develop pediatric-to-adult transitions of care tools for a variety of endocrine conditions. Partnering with a broad coalition of stakeholder organizations, condition-specific working groups were established with experts in the field to evaluate gaps in care coordination and to begin addressing needs in these areas. The resulting toolkits provide a comprehensive approach to successfully managing transitions for patients with various endocrine conditions.

An assessment tool intended to be utilized by the pediatric care team or other clinicians caring for youth to begin the conversation about the youth's needed skills to manage his/her health and health care. This tool indicates the elements specifically related to the clinical condition that should be assessed and documented by the transferring pediatric practice.	This form is suggested to help assess the teen/emerging young adult's knowledge and skills regarding Turner Syndrome and its management. The tool is intended as an aide to help assess the readiness of older teens/emerging young adults in the transition and to be transferred from pediatric to adult care providers.
·	

This form serves as a resource to inform the patient about screening recommendations and other assessments needed in adulthood and which clinician is responsible for conducting it.

The <u>chart</u> should be used to inform the patient about which clinician should be responsible for
